

PROJECT SUMMARY

Cape Fox Lodge was constructed on steep banks overlooking the scenic & remote Tongass Narrows. The modular hotel was constructed to match the lodge structure & had a complete turnaround time of four months, from start to finish. The fast-track of this project, due to weather-related conditions & mountainside restrictions, made modular construction the ideal choice. Modular construction allows for simultaneous activities to occur - site development & foundations are completed while the building is being constructed - resulting in a reduced completion time & lessening the exposure of construction materials to the elements.

FEATURES

- Two & three story facility
- High-performance windows
- Higher quality for the price
- Control of cost overruns
- Building manufactured in a climate-controlled environment

- 1 Bedroom
- 2 Bathroom
- 3 Entry
- 4 Closet
