

**PROJECT SUMMARY**

Aesthetic interest is found everywhere in this dental office building: an 8/12 roof pitch, lap siding, barrel ceilings in the waiting room & hallway, arched pass-thru to a curved reception counter, ceramic tile entry, accent lighting & other unique features. Several exam & procedure rooms are situated in the back of the building to accommodate the doctor's needs, leaving the front portion of the building open for a private consultation room, file storage & a bright, comfortable waiting area. Tucked away in the spacious attic of this clinic, sits a multi-zone heating system to control the atmosphere of the busy office below.

**FEATURES**

- Highly energy efficient
