

PROJECT SUMMARY

The City of Salem, OR contacted Modern looking for a quality, turn-key solution to expand & achieve savings when, after a 12-year absence, commercial air service was returning to McNary Field. The modular building was added to the existing remodeled 1950's terminal. The new configuration needed to accommodate all the needs of air traffic control; TSA, Delta Airlines, baggage handling & rental car operations.

Inside the modular terminal is the main seating area, security checkpoints, & updated communication systems. Modular construction allowed for minimal site impact to the tarmac, as well as current private flights in & out of the airfield.

FEATURES

- Occupancy sensor fans and lights
- Sensor flush valve systems
- Minimal site impact
- Turnkey construction
- Cost-effective

- 1 Terminal/Lobby
- 2 Washroom
- 3 Screening Area
