

PROJECT SUMMARY

A secure “U” configuration was created for Skinner Montessori by installing the buildings with a singular administrative checkpoint & coded entry before access to classrooms or the play area. Setting the buildings to grade made the exterior more aesthetically appealing & increased the sense of permanence. Cumbersome handicap ramps, landings & stairs were eliminated with concrete walkways poured right up to the entries for easy access into the buildings. Interconnecting the roofs of the three buildings also created space above the ceiling for routing sprinkler piping, fire/security alarm systems & the phone/data systems without having to go underground at higher costs. Utilizing modular construction saved the school time by allowing for a quick move in & expense by increasing facility flexibility.

FEATURES

- A large amount of space in a short amount of time
- Lap siding
- 24” eaves and overhangs
- Secured entry
- Classroom and administrative space
- Large classrooms

- 1 Classrooms
- 2 Restrooms
- 3 Administration
- 4 Staff Room
- 5 Storage
